Our company own the excellent designing ability , sophisticated assembly-technique and process experience more than 50 years , based on quality warranty , spirit of satisfying service , further provide the customer high quality slewing bearing.

轉盤軸承產品特點：

轉盤軸承能夠同時承受較大的軸、徑向負荷與傾覆力矩，軸承內圈與外圈帶有安裝孔、潤滑油孔、齒輪，可以滿足各種條件的需求。轉盤軸承內圈與外圈滾動軌道熱處理後經研磨加工，降低摩擦力；耐磨耗使用壽命長；高載荷能力。齒輪齒面熱處理後經研磨加工，齒面光滑、齒形精準。

SUNUS 製造除標準外亦可客製化轉盤軸承，外徑最大可達2500mm。

Characteristics of slewing bearing:

Slewing bearing can afford both heavy axial and radial loads as well as upsetting moment simultaneously. The inner and outer rings of the bearing have mounting holes, lubricating oil holes and gears, meeting the needs of various conditions. The inner and outer rings in the raceway of the slewing bearing are ground after induction hardened. Its characteristics include but do not limited to wear-resistance, long service life and high load capacity. The tooth surface of the gear is ground first and treated with heat treatment afterwards, resulting in the smoothness of the tooth surface and the precision of the tooth shape.

SUNUS Manufactures both standard-size and custom-made slewing bearings with the condition of bearing diameters could reach 2500mm.
